

800F PLUS SYSTEM CONTROLER

FOR all makes of

Mechanical pumps and dispensers

The **800F PLUS** console controls mechanical pumps and dispensers. The **PLUS** is capable of controlling up to 8 mechanical hoses, with 100:1 pulsers and either electric or manual resets, regardless of manufacturer. This console is ideal for all-mechanical sites that require less reporting features than are provided by the MPC HYBRID consoles. The PLUS replaced our 800F Standard console once it was retired after 20 or so years of service, and still remains to be one of the greatest controller values on the market today. Along with controlling any make of retail mechanical pump, the PLUS can be modified to control most any commercial pump with a 120vac reset, a handle switch, and pulser.

Operational Features

- Interfaces with all makes of Mechanical pumps, with or without electric reset.
- Requires only 7" X 9" of counter space
- Controls up to 8 hoses
